SUMMARY

Results-driven Backend Developer with 3+ years of experience specializing in **C++ and backend engineering**. Adept at enhancing system performance and developing automation tools.

SKILLS

- **Languages** : C++, C, Java, Python, HTML, XML, CSS, Javascript, React, SQL, MongoDB
- **Tools**: Linux, Windows, GitHub, GitLab, Jira, Perforce

EXPERIENCE

Cleartrail Technologies

Engineer

TechStack

India

Feb 2023 - Present

C, C++, Python, Shell Scripting, Linux, Windows, Jira, Gitlab

- Worked on various networking protocols such as **SIP/RTP, TCP, UDP, and SCTP**, utilizing internal modules to capture and forward protocol data to downstream components.
- **Enhanced packet detection capabilities** by adding algorithms to implement advanced filters, resulting in improved accuracy and reliability of network data analysis.
- **Integrated OpenTelemetry** for enhanced observability, enabling comprehensive logging, performance metrics, and real-time monitoring of data rates within the component.
- **Resolved over 200 customer-reported issues**, ensuring stability and performance of the networking components in production environments.
- **Developed internal tools and algorithms** to streamline bug identification and issue analysis, automating tasks and reducing execution time by approximately 50%.

Qualcomm

Engineer

TechStack

India

Jan 2021 - Sep 2022

C, C++, Python, Java, Linux, Windows, Jira, Gitlab, Perforce

- **Implemented algorithms to optimize memory management** for a new audio feature, improving system efficiency and performance.
- **Designed and implemented a solution** for resolving audio system clock discrepancies, ensuring synchronization and stability.
- **Developed and validated features** in automotive audio, related to Multi-Zone Audio Support, Active Noise Cancellation, and Engine Sound Enhancement, delivering enhanced in-car audio experiences.
- **Resolved customer-reported issues** related to automotive audio features, ensuring seamless integration and performance across systems.

Qualcomm

Intern

TechStack

India

May 2020 - July 2020

C, Python, Linux, Jira, Gitlab, Perforce

- **Designed a toolkit** for configuring Android system hardware files, and developed a user-friendly GUI to simplify file customization and streamline the configuration process.

Continental

Intern

TechStack

India

May 2019 - August 2019

Python, Github

- **Developed a DecisionTreeClassifier** to classify various vehicle types (e.g., cars) using data from RADAR sensors for self-driving cars.
 - * Optimized the model to achieve approximately **80% True Positive Rate** across all vehicle categories.
 - * **Compared model performance** against other classifiers to evaluate efficiency and accuracy in vehicle classification.
- **Implemented an LSTM model** for vehicle classification in fully automated driving systems.
 - * Achieved a **78% True Positive Rate** for vehicle types with **False Positive and False Negative rates below 4%**.

EDUCATION

International Institute of Information Technology, Bengaluru

Integrated Masters of Technology

India

Aug. 2016 – May. 2021

Christ Church Boys' Senior Secondary School

Class 12 : Percentage - 89.2

India

Graduated May. 2015
